

## **Packing/Un-Packing Details For Metron Eledyne Fire Pump Controllers**

### **United Kingdom Destination**

For any destination within the United Kingdom Metron Eledyne's Fire Pump Controller's will be secured to a pallet for transport. The controller's will be secured to the pallet with the use of straps which will be tightened and insulated from the controller's using stiff cardboard. In addition to this, to provide extra protection the controller's will be wrapped with polythene wrapping to provide scratch protection and small impact protection. Finally, a cardboard sleeve will be placed over the controllers with expandable foam inserts added inside to protect against any causes of damage which could occur in transit, again this will be secured to the pallet. This type of packing is none stackable and only suitable for road transport. When unpacking the controller's please take care and wear the appropriate Personal Protective Equipment (PPE) to ensure the risk of injury is minimised. Make sure the pallet is on a flat and level surface and when removing the strapping please take precautions as the strapping is sharp and can cause injury.

### **International Destination**

For any international destinations the Metron Eledyne Fire Pump Controllers will be packed in a wooden crate which shall be suitable for air freight and sea freight. The Fire Pump Controller's will be secured on the crate and have expandable foam inserts to protect from any potential causes of damage which could occur on the journey to the destination via air freight or sea freight. When unpacking the controller's please take care and wear the appropriate Personal Protective Equipment (PPE) to ensure the risk of injury is minimised. Make sure that the crate is the correct way up and is on a flat and level surface before unpacking. When removing the lid of the crate please take care using any equipment and beware of any nails that may have been used to secure the lid to the crate, as they may have become dislodged and cause injury.
